Numeracy Actions

Making Fractions into Percentages

Step 1: WRITE out the sum $\frac{\text{Your Fraction}}{\text{bottom}} \times \frac{100}{1}$ 	Example: $\frac{17}{30} \times \frac{100}{1}$
Step 2: MULTIPLY the tops MULTIPLY the bottoms $\frac{\text{top}}{\text{bottom}} \times \frac{100}{1}$ 	$\frac{17}{30} \times \frac{100}{1}$ $= \frac{1700}{30}$
Step 3: CALCULATE the percentage $1700 \div 30$  Round your answer up or down	$1700 \div 30$ $= 56.6667$ $= 57\%$

Fractions to Percentages Bookmark

$$\frac{24}{40} \times \frac{100}{1}$$

$$\frac{24}{40} \times \frac{100}{1} = \frac{2400}{40}$$

$$2400 \div 40 = 60\%$$

HOW CAN PARENTS PROMOTE LITERACY AT HOME?

Promote reading at home by joining the local library, encouraging your child to borrow books from the school library, by reading along with school book club choices, or by providing a range of reading materials in the home.

Foster different types of literacy – talk to your child about what's happening in school to support their oral literacy; encourage safe digital literacy by speaking to them about what blogs and sites they access for educational purposes

Remember that Literacy and Numeracy are not about English and Maths. Make it fun, play board games, card games, computer games and quizzes with your child. Even encourage your child to think about the numeracy elements in their favourite sports
